

Stardock Releases CursorFX on Steam: Customize the Windows Mouse Cursor

Plymouth, MI - June 10, 2020 - Stardock released CursorFX on Steam today. A program designed to customize the Windows mouse cursor, CursorFX allows users to customize the Windows mouse cursor to one that is much higher resolution, more responsive, and supports animation and effects.

CursorFX adds support for Windows 10 and high DPI displays, supports 144hz or higher refreshes, and includes new cursors that take advantage of these features. CursorFX is compatible with the thousands of cursors from previous versions of the app, all of which are available on WinCustomize.com.

"The standard Windows cursor technology in Windows dates back to Windows NT," said Brad Wardell, CEO of Stardock. "CursorFX is designed to take advantage of the advances Windows PCs have made over the past several years, including high DPI support and high refresh rate monitors, while giving users the option to visually change their mouse cursor to one that suits their tastes."

With CursorFX, users can quickly change the size, color or drop shadow of any cursor right from the settings menu, or personalize their mouse clicks with sound effects. Several options for motion trails are also included in CursorFX, providing several options for customization. Using the in-app theme editor, users can even import their own .PNG files and create custom cursors from scratch.

CursorFX 4 is now available on [Steam](https://store.steampowered.com/app/1145100/CursorFX_4/) for \$4.99. To learn more, visit the [forums](#).
