

# Stardock Releases Major Version Update for Fences

A new feature and several community requested improvements are in this update

**Plymouth, MI - July 22, 2021** - Stardock released a major update to *Fences*, its popular Windows desktop organization software, today. *Fences* creates a one-of-a-kind experience for users by automatically organizing their Windows desktop shortcuts and icons in shaded areas, offering a clutter-free workspace for creating.

*Fences* tucks files and folders away in plain sight with designated portals while also providing the functionality of pulling specific content onto the creative workspace. Based on preference rules, users can customize how icons are viewed and where files originate from.

The 3.1 version update for Fences adds a new feature: Target Based Rules. Using this option, users can access something like a Steam link, or any other .lnk, .url, or .website files right within their fences. In addition, v3.1 improves startup times and disables icon move animations, plus makes several other improvements based on user feedback. This includes eliminating folder portal 'flickers' and incorrect sorting of icons outside of the fences on the desktop. v3.1 also improves the way icons and fences work on multi-monitor setups.

Users have several options for customizing fences. The "portals" feature allows users to create a desktop portal from any folder, which automatically populates the folders' contents into an easy-to-find Fence. Quick access to a commonly used folder without having to open Windows explorer is just one of many things that makes *Fences* ideal for organization and easy to use.

Users can create "pages" on their desktop, accessed with a simple right or left swipe. Choose which Fences remain on each individual page and find them easily when switching between tasks. For people who use their PCs for dozens of different assignments and activities, the "pages" feature allows for easy organization and a seamless flow from task to task.

Fences is available through [Stardock](#) or on [Steam](#). It is also part of the Object Desktop suite, which contains over a dozen apps for complete Windows PC customization. For more information, visit the [forums](#).
