

Stardock Releases v3.5 for *Multiplicity*, a Popular Wireless KM Software Solution

Plymouth, MI – August 13, 2020 – Stardock released a version update for *Multiplicity*®, its versatile, secure, and affordable wireless KM/KVM software solution, today. Users can instantly connect multiple PCs and work easily between them while using a single keyboard and mouse without all of the wire hassles and hardware cost of a traditional switch.

Multiplicity's seamless mode allows users to establish a keyboard and mouse connection between two computers adjacent to each other and on the same network. Users can stack their displays and move easily between them, or create a virtual “docking space” for their laptop that will easily reconnect every time it comes back within proximity.

v3.5 implements several changes based on user feedback, including performance improvements for when a machine is under heavy load from other processes, numerous fixes for machines with mixed DPI setups, and messages warning users of potential incompatibilities.

The program works perfectly for professionals who use more than one machine, freeing up desk space by eliminating the need for traditional hardware boxes and making it easier to work between computers efficiently.

Copy and pasting text and images between two computers is fast and easy as well with *Multiplicity*. When text or images are moved between PCs, they retain their formatting, making for a clean and consistent work experience.

“*Multiplicity* removes the need for cumbersome hardware and is the best solution to a traditional KVM switch,” said Brad Wardell, CEO of Stardock. “We have a huge community of users and we’ve addressed some major points of their feedback with v3.5.”

All versions of *Multiplicity* are available through [Stardock](#), and the KM version is available on [Steam](#). *Multiplicity* KM is also included with a membership to [Object Desktop](#)™, Stardock's complete suite of desktop enhancements that includes award-winning programs like [Fences](#)®, [Groupy](#)™, [Start10](#)™, and more.
