

New and Improved Version of Stardock's *Tiles* Announced

Beta Now Available for Object Desktop Users

Plymouth, MI - February 02, 2021 - Stardock announced a new v2.0 update for the popular Windows® productivity tool, *Tiles*™, today. *Tiles* is a program that lets users create multiple desktops of related programs, files, and links through the use of a customizable sidebar on the Windows desktop. By holding the shift key and dragging programs onto the sidebar, *Tiles* will create a thumbnail of the application, keeping the desktop organized and easy to navigate.

The new version of *Tiles* adds full support for Windows light and dark modes, as well as Stardock's *Curtains* program, which will allow for a fully cohesive desktop look. The program will also work perfectly with *Groupy*, allowing groups to show up together in *Tiles* in order to maintain the best possible organization.

"It's important that we keep our apps up to date with changes in technology," said Stardock CEO Brad Wardell. "One of the things the new *Tiles* focuses on is high DPI support for modern monitors and general performance increases across the board in order to use less PC resources."

To provide better organization, users can now customize whether certain *Tiles* categories show only maximized or minimized windows. This feature is especially helpful for multi-monitor setups, allowing users to view tiles on one monitor and click through to apps and tasks they can utilize on their main monitor.

Although plenty has changed for *Tiles* in v2.0 to make it a better program for users, there are a few fan favorite features that remain. *Tiles* is still fully touch-ready for Windows tablet users and is still completely customizable, allowing for custom backgrounds and color schemes.

The beta version of *Tiles* v2.0 is now available exclusively through Stardock's [Object Desktop](#)™ suite of desktop enhancements, with a full release to all users coming soon. Object Desktop includes programs such as Fences®, Start10®, Groupy™, SoundPackager™, DeskScapes™ and Multiplicity®. To learn more, visit our [forums](#).
